Evaluate Final Meeting (ceremony of Participation certificates of participants and Presentation of plaques to supporting organisations)

16 yanıt

How can we reach young people to disseminate the project results and the informing them about European Green Deal objectives?

15 yanıt

Social media

Social Media (SM) is an important way to reach young people, usage of popular SM profiles youtubers, "stars" to receive attention from youngsters. Also engage with Stakeholders working with young people already and ask them to address the topic or let the project plan activity with them. Join other relevant established events / presentations /fairs etc where there already is an audience to reach out. Interactive activities, competitions are always a good way to attract an audience.

by social media and meeting

We need to create more activities that would be interesting for young people. I think the activities we did in Dalyan are suitable for young people! We will try to implement them!

via the social media channels and with short presentations and discussions in classes with students from middle and high schools

Social media campaign. Recruiting youth workers.

Social media

Meeting and social

Today, social media is a powerful way to communicate with young people, I suggest keeping social profiles update

It is possible to disseminate project presentations and project activities thorough social medias, other EU project meetings, Visiting Local partners, organizing local dissemination meetings

In educational institutions, starting from basic education to university. With all kinds of non-governmental organizations. With all media and social media tools...

By spreading awareness through social media mostly.

Using social media and visiting schools unis etc

Multiplier events

How can we develop a Local partnership structure (Environmental based NGOs, Environmental based Governmental Organisations, Schools, Universities, Local Authorities and Youth Groups) for the dissemination of the project outputs and European Green Deal targets ? Meetings, visits, social media ..

13 yanıt

Constant work with building local partnership structures, it's a full-time job! Find partners that can benefit from your activities/your organization, they are prone to listening. Ask these organizations who they can recommend you to talk to in their networks in order to expand the partnership structures - personal recommendations gives you a foot in the door. "Cold calling"; contact organizations that are interesting to you and try to meet with them and join their activities / ask them to join your own activities. Important is to communicate your vision, a vision partnership organizations can identify themselves with and think is good and beneficial for them or for humanity - nobody can say no to a cleaner, healthier more sustainable environment? Or say no to supporting local/regional nature, stakeholders, businesses, youth work and youngsters? Schools are already working with similar topics, offer schools an attractive information activity - teachers will be happy! (collaborate with teachers so they feel they are involved as well). PR-activities - same as above only with journalists as targets. Don't be modest, just call up important people!

above all social media but meetings too

We need to organise meetings on a local level which is sometimes difficult but we are working on it.

meetings with representatives of the NGOs, Governmental Organisations, Local Authorities and visits in schools and universities

Meetings with organisations leaders, study visits to the organisations.

Meetings, visits, social media, digital meetings, representation during other projects related to sustainability

Social media

Social media, awarnwss activities like we did

Visitits place of interest and share on social

Social media and meetings with young people

More and more communication with local partners, visiting local partners, organizing face to face and online meetings.

How can we develop a Local partnership structure (Environmental based NGOs, Environmental based Governmental Organisations, Schools, Universities, Local Authorities and Youth Groups

for the dissemination of the project outputs and European Green Deal targets ? Meetings, visits, social media ..

Start with local workshops and work groups

How can we improve the quality of project outputs ?

17 yanıt

Make a roadmap and a communication plan to stay on track of to do's - this way you work step by step every week on the project outputs !

share our outputs by social media

We can reach out to each other and share our progress.

exchange the good practices from each country and create common space with shared docs for suggestions, materials, environmental games and fun activities to attract students and kids

Continue regular communication among the partners

-

Try to involve as much people in the project as possible

More creativity and digital skill

They were ok

I think communication is an important medium

Project is giving opportunity to assign external Evaluator/ Expert to evaluate project quality as presentation, establishing strong local partnership with local partners, online survey and following the instruction of the external evaluator or expert outside the project team.

By keeping project outcomes up to date and ensuring they are sustainable.

Good stakeholders and interested partners can improve the quality of the project

More posts on social media

By continuing with the good work, trying to always keep up with social marketing etc.

work as a team

Dissemination

How can you transfer your good project or practices to the "Let us think green" project?

12 yanıt

By responding to this evaluation! And present good practice at partner meetings. I think it is important for Project Leader to give direction; partners respond. Evaluation like this is good! Comprise and spread answers to all partners. Ideas should be integrated in the roadmap and communication plan. (I can send a roadmap and communication plan from LENE - is a simple but good way of staying up to date). OR, use Trello as Roadmap and communication plan - if you pay for the extra services they offer, you can also add timelines, reminders etc. (however, I prefer to use no cost platforms as they are always available)

by stamp and meetings as Calabria Eco Fest

I think they are already implemented in the project! Especially our cleaning practice.

As mentioned above - exchange the good practices from each country and create common space, exchange tips and know-how experience

Adding new tools for the dissemination

Social media

I will share it threw social media and provide information threw live conversations with surrounding people of mine

Proposing awarnwss activities

Involving people in active citizenship

Giving the details about application of the good project or practices to partner organization and arranging SWOT Analysis of each good project and practices.

By staying in touch with project stakeholders, following EU project announcements and studies, participating in similar project studies and providing support...

by implementing them in our countries

How can you improve the quality of project outputs in terms of content, design and dissemination method?

10 yanıt

To secure project content output, use a Roadmap and Communication Plan; this way the team works every week step-by-step towards the goal - this constant activity will lead to better results in the end and help you keep yourself and the team focused.

Design; use skilled colleagues in the project for design or pay an external person - maybe somebody who is connected in think green topics with an existing network?! Canva is a free online tool to create good designs, good to build up good designs within each partner organisation. Dissemination method depends on the project topic. The development of local partnership structures equals dissemination and the build up should be structured through the communication plan - which enables you and your team to work on dissemination every week, step-by-step.

write a 1-page brochure of the results achieved

No need of improvement i think

I can use all my social media channels and contacts to disseminate the outputs

Base our work on experts recommendations

-

Getting inspiration on internet, using tips from content creators

Inviting people from my village showing them pictures and video about the project that was held in dalyan

Discussing to improve quality of project outputs among project partner organizations and following the recommendations and evaluations of the external evaluators.

Enriching content, updating designs using modern technologies and reaching the target audience with current techniques...

What are your suggestions for the meeting and environmental awareness activities to be held in Antalya between 26-31 May 2024?

13 yanıt

Start the meeting with an "energizer" / warm-up / getting-to know each other exercises - to boost colleagues from all countries to get to know each other (Clare has good ideas and activities for this). Place name tags on tables to mix colleagues and countries for a couple of lunches, just to get people to mix and get to know each other. For Antalya, one idea could be to repeat the activities from Dalyan, similar activities, and improve them. This way we establish a learning curve within the project; cleaning the waters: maybe it is possible to use small individual canoes instead and each canoe / boat is responsible for 10 meters of coast line for example - this would be a more efficient way to collect trash. Same with cleaning the beach, maybe each person can be responsible for a land strip of a couple of meters - this would mean a more methodical way of executing the actual task. Just a suggestion. We can also, like in Dalyan, find out more about the Antalya region and their needs in terms of environmental challenges and build the program around this region.

the same modus operandi done to Daylan but I prefer to have a "round table"

I would like to have the same activities as i think it is important for the project - cleaning, planting trees, picnic in the nature, visiting local partners and understanding how local people think .

More meetings with local young people and some workshops together with them; exchange of the most common daily based activities in each country regarding the environmental protection and the most problematic areas.

Just like in Dalyan, so in Antalya to maintain a balanced time of work and rest. Joint activities really strengthen the team and provide more knowledge. Study visits can be one of the most important things.

-

Involve as much live activities to participate in as possible

Make a sort of strike for environment, like Friday for future

Like the activities in daylan

Arranging similar organization in Antalya, like Dalyan.

In this meeting, it will be useful to present examples of neglected and protected environments.

A trip to Pamukkale

I think the program in Dalyan was perfect. we should do kind of the same in Antalya

Please write your free opinions for Dalyan meeting, environmental awareness activities ?

14 yanıt

Cleaning the waters: maybe it is possible to use smaller individual canoes/boats instead ? Each canoe / boat is responsible for 10 meters of coast line for example - this would be a more efficient way to collect trash. Same with cleaning the beach, maybe each person can be responsible for a land strip of a couple of meters - this would mean a more methodical way of executing the actual task. Planting trees, secure more shovels, maybe partners can also help watering and marking the trees. For each activity I would suggest an information text on a project paper; river / beach / planting trees - find out more about the background of the river / beach / planting trees, what kind of tree. Description of environmental challenges. We already heard about this information during presentations, but a sheet of information paper around the activity in writing would be good I think! Maybe create a project "book" of information of activities, that can also serve as a PR-pamphlet and project-log for the future. A nice project output, easy to share with others and a memory for the organization.

All done was good

I think the meeting was overall great! I really loved the activities and the partners. You did an amazing job! Bravo !

I want to say that we could have cleaned more the beach, it was too short 15-20 min !
And also to respect more food preferences of participants for next meeting :)

I liked the environmental awareness activities very much but the cleaning of the beach and of the river could have been a bit longer and more instruments for the river were needed. I would be very happy if more information was given to us from the local people and authorities about the whole ecosystem and the life in Dalyan - the river, the lake, the historical sites and their protection, the tourism challenges and the governmental support for the area.

Perhaps there was a desire for more direct communication with young local people. The external expert had not fully delved into the project itself, so the advice could be relatively useful. In general, the publicity of the project was excellent, the activities were useful.

I really liked the activities and overall experience is very positive. I felt welcomed and involved.

Great, a nice way to enjoy surroundings. We should have invited more people

Perfect

It was beautiful, full of interesting and important activities, a good way to communicate and share new ideas

Everything was implemented in terms of agenda of Dalyan Meeting and awareness Activities. It was reached to planned targets of Dalyan Meeting and Green Awareness Activities. Only one missing, Greek partner could not send any participants to meeting because of the some unexpected reason.

Every stage of the Dalyan meeting has been reached.

Very interesting and valuable experience to bring home

I really enjoyed all of them, organisation was perfect

I think everything was planned really good in advance, the days were well structured and the activities were plenty and very divers. I would have wished for a closer get to get her with all partner countries, some welcoming games, done and lunch together and not so much "separated".

Please write your recommendation for Antalya Meeting , Green Exhibition, Environment Activities, Visits to local partners ?

9 yanıt

For Antalya, one idea could be to repeat the activities from Dalyan, similar activities, and improve them. This way we establish a learning curve within the project; cleaning the waters: maybe it is possible to use small individual canoes instead and each canoe / boat is responsible for 10 meters of coast line for example - this would be a more efficient way to collect trash. Same with cleaning the beach, maybe each person can be responsible for a land strip of a couple of meters - this would mean a more methodical way of executing the actual task. Just a suggestion.

We can also, like in Dalyan, find out more about the Antalya region and their needs in terms of environmental challenges and areas in need of protection and build the program around this region.

about meeting/ green exhibition it would be good to dialogue with other associations, as brainstorming, and not that each association shows its activities done (step already done in Dalyan). About Visits will be nice to see permaculture ecovillage in Antalya

My recommendations are like I said try to do the same things, but in a different bigger town. I am sure we will face some different situations. We can also plant flowers, explore the nature, beach.. I am sure Antalya will be amazing too :)

I would recommend more clarity over the program and more information for each activity, as well as providing translation at every stage of the activities so that people feel included and not excluded when they do not understand the subject of speaking.

-

Stay on schedule, more interactive activities

Visit more animal rescue organizations

We must make good preparation together by discussing all details and providing of the participation of the local partners from Antalya and Dalyan.

Green Exhibition, Environmental Activities and Local Partner Visits should be held at the Antalya Meeting.
